

BRITTON SMITH

Windows Systems Administrator | Cyber Security Specialist | Python Developer

britton.j.smith@proton.me

GitHub: [GitHub Portfolio URL] • LinkedIn: [LinkedIn Profile URL]

PROFESSIONAL SUMMARY

Highly analytical Military Veteran and Cybersecurity Specialist with hands-on experience in vulnerability assessment, penetration testing, digital forensics, incident response, Windows and Linux administration, and Python software development. Demonstrated success conducting controlled exploitation exercises, validating security vulnerabilities, performing forensic analysis, and producing professional technical documentation through the CyberProAI Internship. Experienced utilizing the Cympire Cyber Range, Bina AI, and GitHub to support cybersecurity projects, security assessments, and AI-assisted research. Seeking to leverage strong technical, analytical, and problem-solving skills in a Cybersecurity Analyst, SOC Analyst, or Information Security role.

MILITARY SERVICE

Army National Guard (2006–2014)

- **Operation Iraqi Freedom Veteran** (2008–2009)
- **Commandant's List Recipient**

Maintained a class performance rating exceeding 95% across academic evaluations, physical training, and leadership performance.

EDUCATION & CREDENTIALS

Cyber Security Specialist — Ivy Tech Community College (*Jan. 2023 – Present*)

Certificate in Business Information Technology — Ivy Tech Community College (*May 2026*)

Relevant Coursework: CompTIA A+ Preparation (A) • CompTIA Security+ Preparation (A)

CCNA: Introduction to Networks — Cisco Networking Academy (*Issued Aug. 14, 2025 • 70 Hours*)

PROFESSIONAL EXPERIENCE

CyberProAI — Remote Enterprise Environment

Cybersecurity & Systems Administration Intern (Summer 2026 | Two-Month Internship)

- Performed vulnerability assessments, host reconnaissance, authentication troubleshooting, and security analysis using Windows and Kali Linux within the Cympire Cyber Range.
- Validated **CVE-2011-2523** by exploiting **vsftpd 2.3.4**, obtaining remote root access and documenting the penetration testing workflow.
- Applied digital forensics using **Bina AI**, performing evidence acquisition planning, **SHA-256** integrity verification, and forensic documentation.
- Resolved Metasploit launcher failures, Linux permission issues, and John the Ripper configuration problems, enabling successful exploitation exercises.
- Produced cybersecurity assessment reports (**CPAI-2026-001** and **CPAI-2026-002**) with executive summaries, technical findings, business impact, and remediation recommendations.
- Maintained a public GitHub portfolio documenting cybersecurity projects, internship deliverables, technical reports, and professional documentation.

TECHNICAL SKILLS

Operating Systems: Windows 10/11 • Windows Administration • Kali Linux

Cybersecurity: Vulnerability Assessment • Penetration Testing • Digital Forensics • Incident Response • Security Operations (SOC) • Threat Analysis • Risk Assessment • Security Documentation

Cybersecurity Tools: Nmap • Metasploit Framework • John the Ripper • Secure Shell (SSH) • Cympire Cyber Range • Bina AI • Git/GitHub • ChatGPT Enterprise Technologies: Active Directory Fundamentals • Group Policy Fundamentals • PowerShell Fundamentals

Networking: TCP/IP • Cisco Networking • Network Troubleshooting

Programming: Python • JSON • Data Modeling • Software Architecture

CYBERSECURITY PROJECTS

NOVA Application Platform (*Core Developer*)

Designed and developed a modular Python application platform demonstrating enterprise software architecture, centralized data management, cybersecurity tooling, workflow automation, and structured technical documentation.

- **Johnny Phive Data Core** — Relational database engine supporting persistent data storage, schema management, and application integration.
- **NOVA Sentinel** — Cybersecurity vulnerability research utility supporting CVE tracking, NVD data collection, and vulnerability analysis.
- **NOVA Investment Analysis** — Portfolio management application supporting financial transaction tracking and investment analysis.
- **NOVA Parrot** — Structured documentation platform for technical writing, project organization, and knowledge management.

CORE COMPETENCIES

Regulatory Compliance • Technical Documentation • Risk Assessment • Operational Planning • Time Management • Stakeholder Communication • Problem Solving • Independent Decision-Making • Process Adherence • Customer Service

WORK HISTORY

Commercial Transportation & Logistics Professional (*2019–Present*)

Employers: J.B. Hunt Transport Services • R+L Carriers • Marten Transport • Schneider National

- Maintained compliance with FMCSA regulations, company safety policies, and hazardous materials procedures.
- Managed time-sensitive logistics, operational documentation, and regulatory records with exceptional accuracy.
- Demonstrated independent decision-making and problem-solving while working safely in remote, unsupervised environments.
- Recognized for reliability, professionalism, and customer service in fast-paced operational environments.

Security Assurance Penetration Tester

Elsevier  • 3.8 ★

Pennsylvania

\$71,600 - \$119,400 a year - Full-time

You must create an Indeed account before continuing to the company website to apply

[Apply on company site !\[\]\(51ad79097a00c57424da84757aa606bc_img.jpg\)](#)  

Full job description

Are you a collaborative Penetration Tester looking to work for a mission driven global organization?

About the role - This role supports the offensive security function within Elsevier's Security Engineering team. You will perform hands-on security testing and peer review activities, validate vulnerabilities and security controls, and support the automation of security assurance processes. This is a hands-on role for a motivated security professional eager to grow in a collaborative, fast-paced environment.

About the team - The Security Assurance team supports the third-party penetration testing program, security control validation, and ongoing offensive security testing activities.

Responsibilities

- Tracking and triaging findings from third-party assessments, ensuring timely follow-up and remediation tracking.
- Collaborating with development, platform, and product teams to communicate findings, track remediation efforts, and improve overall security posture.
- Facilitating post-assessment reviews and lessons learned sessions with development teams to identify recurring security issues and promote secure development practices.
- Maintaining program documentation, test records, and reporting artifacts.

- Conducting penetration testing of web applications, APIs, cloud environments, and internal systems, escalating complex testing scenarios as needed.
- Performing peer review of penetration testing deliverables, including test plans, findings, and final reports.
- Participating in scoping exercises and contributing to the selection of appropriate testing methodologies.
- Supporting security assessments of GenAI-powered applications and features, including LLM integrations, RAG pipelines, and AI agents.
- Assisting in testing for AI-specific vulnerabilities such as prompt injection, jailbreaking, insecure output handling, model data leakage, and training data poisoning.
- Contributing to the development of internal GenAI security testing checklists and methodologies, aligned with frameworks such as OWASP Top 10 for LLMs.

Requirements

- Experience in information security, penetration testing, or a related field. Experience or coursework in software development, DevOps, or scripting is highly desirable.
- At least one relevant security certification (e.g., Security+, eJPT, PNPT, CEH, or equivalent) preferred; advanced offensive security certifications such as OSCP are a plus.
- Foundational understanding of web application architecture, networking, and operating system security.
- Familiarity with common penetration testing tools (e.g., Burp Suite, Nmap, Metasploit, Nuclei, or equivalent).
- Working knowledge of OWASP Top 10, common CVEs, and vulnerability scoring frameworks (CVSS).
- Scripting ability in at least one language (Python, Bash, PowerShell, or similar); development experience is a strong plus.
- Basic understanding of cloud environments (AWS, Azure, or GCP) and associated security considerations.
- Exposure to SAST/DAST tools and secure code review practices is desirable.
- Awareness of GenAI security risks (prompt injection, LLM abuse, insecure AI integrations)

Elsevier is a renowned global information analytics company that primarily focuses on providing scientific, technical, and medical (STM) research content, tools, and services. It is

one of the largest publishers of academic journals and scholarly literature in the world. Elsevier operates in various domains, including science, technology, medicine, social sciences, and more. They publish a vast number of peer-reviewed journals covering a wide range of disciplines. These journals act as platforms for researchers and academics to share their findings and contribute to the advancement of knowledge in their respective fields. In addition to publishing, Elsevier offers a suite of digital solutions and services to support researchers, scientists, and professionals in their work. They provide online platforms like ScienceDirect, Scopus, and Mendeley, which offer access to a vast repository of scholarly articles, research papers, and other scientific content. These platforms often serve as essential resources for software developers seeking to stay updated with the latest scientific advancements.

U.S. National Base Pay Range: \$71,600 - \$119,400. Geographic differentials may apply in some locations to better reflect local market rates. If performed in Colorado, the base pay range is \$71,600 - \$119,400. If performed in New York, the base pay range is \$78,700 - \$131,400. If performed in New York City, the base pay range is \$85,900 - \$143,300. If performed in Rochester, NY, the base pay range is \$71,600 - \$119,400. If performed in New Jersey, the base pay range is \$84,546 - \$135,054. This job is eligible for an annual incentive bonus. Application deadline is 09/17/2026.
