

CYBERPROAI, CYMPIRE, AND BINA

A Research Report on Cybersecurity, Artificial Intelligence, and Workforce Development

Prepared for

CPIN-280 Cyber Security Internship

Professor Rami Salahieh

Ivy Tech Community College

Prepared by

Britton Smith

June 2026

Week 02 Research Assignment

This report examines CyberProAI, Cympire, and Bina, with a focus on their business operations, cybersecurity applications, artificial intelligence capabilities, workforce development initiatives, technology innovation, and career opportunities. The research includes information gathered from company documentation, government publications, independent news reporting, academic partnerships, and military training deployments.

EXECUTIVE SUMMARY

CyberProAI, Cympire, and Bina represent an integrated approach to cybersecurity workforce development, cyber readiness, and artificial intelligence-assisted technical education. The organizations have established deployments across educational institutions, government-sponsored training initiatives, military organizations, and enterprise environments. Rather than focusing on a single cybersecurity product, the CyberProAI ecosystem combines workforce development, cyber range simulation, and AI-assisted learning into a unified framework designed to improve technical readiness and cyber resilience (CyberProAI, n.d.).

Participants in an international cyber training initiative receive "hands-on experience in advanced simulation environments such as Cympire and Bina" (Government of Israel, 2025). The program is highly selective, with participants chosen through a competitive evaluation process and trained through CyberProAI Israel (The Jerusalem Post, 2025). These activities demonstrate that CyberProAI's role extends beyond software development and includes active participation in cybersecurity workforce development.

The Cympire platform is used within the Israel Defense Forces Cyber Trainer Facility, where cyber defenders train against realistic attack scenarios designed to replicate operational conditions (Kabir, 2026). Describing the realism of the environment, one instructor stated, "The attacks look real because they are real" (Kabir, 2026). This approach emphasizes practical cyber defense skills and realistic adversary simulation rather than purely theoretical instruction.

CyberProAI's ecosystem combines cybersecurity education, workforce development, artificial intelligence, and operational readiness training. Through Cympire's cyber range capabilities and Bina's AI-assisted learning environment, the organization addresses challenges facing modern cybersecurity programs, including technical skills development, workforce readiness, and cyber resilience across government, educational, military, and enterprise sectors (CyberProAI, n.d.; Government of Israel, 2025; Kabir, 2026).

CYBERPROAI

Company Overview

CyberProAI is an international cybersecurity and artificial intelligence organization focused on workforce development, cyber readiness, and technical education. The company operates an ecosystem that includes Cympire, a cyber range platform, and Bina, an AI-assisted learning environment. Its solutions support educational, enterprise, government, and military organizations through cybersecurity and workforce development initiatives (CyberProAI, n.d.).

Participants in an international cybersecurity training initiative receive "hands-on experience in advanced simulation environments such as Cympire and Bina" (Government of Israel, 2025). The program is highly selective and conducted through CyberProAI Israel (The Jerusalem Post, 2025). In the United States, Ivy Tech Community College partnered with CyberProAI to provide students with cybersecurity training and workforce development opportunities (Ivy Tech Community College, 2025).

Business Focus

CyberProAI focuses on addressing cybersecurity workforce shortages through education, simulation, and artificial intelligence. Its ecosystem combines technical training, cyber range exercises, AI-assisted learning, and workforce development initiatives into a unified framework designed to improve technical readiness and practical cybersecurity skills (CyberProAI, n.d.).

Cybersecurity, AI, and Innovation

CyberProAI addresses challenges including workforce shortages, technical skills development, cyber readiness, and cyber defense training. Artificial Intelligence is integrated throughout the organization's learning platforms and workforce development tools to support technical education and skill development (CyberProAI, n.d.). A key innovation is the integration of multiple specialized platforms into a single ecosystem that combines cybersecurity education, simulation, and AI-assisted learning.

Career Opportunities

Potential career opportunities include cybersecurity analyst, SOC analyst, software developer, AI specialist, solutions engineer, cyber range instructor, technical trainer, and security consultant. Students interested in similar organizations would benefit from developing cybersecurity, programming, AI, cloud, and communication skills.

CYMPIRE

Company Overview

Cympire is a cybersecurity training and simulation platform within the CyberProAI ecosystem. The platform specializes in cyber range technology designed to help organizations develop practical cybersecurity skills through realistic training environments. Cympire supports military, government, enterprise, and educational customers through cloud-based cybersecurity training and assessment solutions (CyberProAI, n.d.). The company won a tender to provide the Israel Defense Forces with a cybersecurity simulator platform integrated with cyber range technology, training content, and support services (Ynet News, 2024).

Business Focus

Cympire focuses on improving cyber readiness through practical training and simulation. The platform places participants in realistic cybersecurity scenarios where they must identify, investigate, and respond to cyber threats, emphasizing hands-on learning and operational preparedness.

Cybersecurity, AI, and Innovation

Cympire addresses cybersecurity challenges including workforce readiness, incident response preparation, cyber defense training, and critical infrastructure protection. The platform is used within the Israel Defense Forces Cyber Trainer Facility, where personnel train against realistic attack scenarios designed to replicate operational conditions (Kabir, 2026). Cympire was also used during Cyber Yankee 2026, a large-scale cyber defense exercise involving military, government, and critical infrastructure participants (University of Central Florida Business Incubator, 2026). These applications reflect the platform's emphasis on operational realism and cyber readiness.

Career Opportunities

Career opportunities associated with Cympire include cybersecurity analyst, SOC analyst, incident response specialist, security engineer, cyber range developer, and cybersecurity instructor. Students interested in similar organizations would benefit from developing cybersecurity, cloud, incident response, and threat analysis skills.

BINA

Company Overview

Bina is the Artificial Intelligence learning platform within the CyberProAI ecosystem, focused on technical education, workforce development, and AI-assisted learning. The platform supports cybersecurity, programming, data management, and artificial intelligence education (CyberProAI, n.d.). Bina supports more than 55 Large Language Models (LLMs), over 33 programming languages, and more than 300 hours of cybersecurity training content (CyberProAI, n.d.).

Business Focus

Bina focuses on accelerating technical workforce development through Artificial Intelligence. The platform uses AI-assisted instruction, automated assessment, and adaptive learning to support technical education and skills development (CyberProAI, n.d.).

Participants in an international cybersecurity training initiative receive "hands-on experience in advanced simulation environments such as Cympire and Bina" (Government of Israel, 2025). The initiative is a selective international cybersecurity training program conducted through CyberProAI Israel (The Jerusalem Post, 2025).

Cybersecurity, AI, and Innovation

Bina supports cybersecurity workforce development through structured learning pathways, technical laboratories, coding exercises, and cybersecurity education. Artificial Intelligence serves as the foundation of the platform, supporting personalized learning experiences, technical guidance, and adaptive educational pathways (CyberProAI, n.d.).

The platform combines cybersecurity education, software development training, data management instruction, and AI learning within a single environment. Its use within international cybersecurity training initiatives highlights its role in workforce development and technical education (Government of Israel, 2025; The Jerusalem Post, 2025).

Career Opportunities

Career opportunities associated with Bina include artificial intelligence, software development, cybersecurity education, machine learning, and technical training. Students interested in similar organizations would benefit from developing programming, cybersecurity, AI, cloud, and communication skills.

PERSONAL REFLECTION

CyberProAI and its ecosystem of platforms were the most interesting organizations examined because they combine cybersecurity, artificial intelligence, workforce development, and operational readiness into a unified approach. The organization demonstrates how cybersecurity education is evolving beyond traditional classroom instruction through the use of cyber range simulations, AI-assisted learning, and practical training environments. This approach provides a clearer understanding of how modern organizations are addressing cybersecurity workforce shortages while preparing students and professionals for real-world challenges.

The organizations examined align closely with my career goals as a Cyber Security Specialist student and participant in the CyberProAI internship program. I am currently developing skills in cybersecurity, networking, technical documentation, and artificial intelligence, and these organizations reflect many of the areas I would like to continue exploring professionally. In particular, I would like to strengthen my knowledge of cybersecurity operations, incident response, cloud technologies, threat intelligence, and AI-assisted security tools. Developing these skills will help prepare me for future opportunities in cybersecurity and related technology fields.

Comparisons with Hack The Box, SimSpace, and Keysight Technologies provided additional perspective on CyberProAI's position within the cybersecurity industry. While many organizations focus on a specific area such as technical training, cyber range simulation, or network testing, CyberProAI combines workforce development, AI-assisted learning, and operational cyber readiness into a unified ecosystem. This integrated approach, combined with documented deployments in education, government, military, and critical infrastructure environments, was one of the factors that made the organization particularly interesting and reinforced my interest in developing the skills needed to contribute to similar initiatives in the future.

APPENDIX A

CyberProAI Ecosystem Overview

Visual hierarchy:

CyberProAI

|

+-- Bina

|

+-- AI-Assisted Learning

|

+-- Workforce Development

|

+-- Technical Education

|

+-- Skills Assessment

|

+-- Cympire

|

+-- Cyber Range

|

+-- Simulation

|

+-- Military Training

|

+-- Enterprise Readiness

APPENDIX B

Leadership & Strategic Advisors

Include:

Gabi Ashkenazi
Former IDF Chief of Staff
President and Partner

Neil Hersey
Former Deputy Commanding General Operations
U.S. Army Cyber Command
Senior Advisor

Bob Flores
Former CIA CTO
Senior Advisor

Ken Smith
Director of Solutions and Strategic Partnerships
Former Arctic Wolf
Cybersecurity educator

APPENDIX C

MILITARY AND GOVERNMENT CYBER TRAINING APPLICATIONS

CyberProAI and its cyber range subsidiary, Cympire, have established a presence within military, government, and critical infrastructure cybersecurity training environments. Publicly available information indicates that the organization's platforms are used to support cyber readiness, workforce development, and operational cyber defense training.

In October 2024, Cympire announced that it had been selected by the Israel Defense Forces (IDF) to provide a cybersecurity simulator platform integrated with cyber range technology, training content, and training services. The deployment provides the IDF with a cloud-native training environment designed to develop cyber defense skills through realistic simulation exercises (Ynet News, 2024).

Additional insight into the operational use of the platform was provided through coverage of the IDF Cyber Trainer Facility. The facility functions as a cyber warfare training environment where defenders are exposed to realistic attack scenarios that replicate operational conditions. Describing the realism of the exercises, one instructor stated, "The attacks look real because they are real" (Kabir, 2026). Training exercises are designed not only to evaluate technical defenders, but also to assess command decision-making, operational coordination, and incident response procedures under pressure.

Military applications extend beyond Israel. During Cyber Yankee 2026, Cympire's cyber range platform was used to support a large-scale critical infrastructure defense exercise involving military personnel, government agencies, utility-sector partners, and international participants. The exercise focused on defending enterprise and critical infrastructure networks against sophisticated cyber threats while improving operational readiness and cross-organizational coordination (University of Central Florida Business Incubator, 2026).

Leadership associated with the organization also reflects a strong defense and intelligence background. Public information identifies Lt. Gen. (Ret.) Gabi Ashkenazi, former Chief of Staff of the Israel Defense Forces, as President and Partner of CyberProAI. Senior advisors include Maj. Gen. (Ret.) Neil S. Hersey, former Deputy Commanding General of Operations at U.S. Army Cyber Command, and Bob Flores, former Chief Technology Officer of the Central Intelligence Agency (CyberProAI, n.d.; Ynet News, 2024).

Collectively, these deployments and leadership affiliations demonstrate CyberProAI's focus on operational cyber readiness, realistic cyber defense training, and workforce development across military, government, and critical infrastructure sectors.

APPENDIX D

Competitive Landscape

Company	Focus	CyberProAI Differentiator
Hack The Box	Technical Labs	Integrated workforce development ecosystem
SimSpace	Enterprise/Military Ranges	Education + simulation combined
Keysight	Network testing & simulation	AI-assisted workforce development
