

CYBERPRO AI INTERNSHIP

Week 03 Work Report

CPAI-2026-005

Prepared By: Britton Smith

Reporting Period: Week 05

Course: CPIN-280 Cyber Security Internship

Bottom Line Up Front (BLUF)

Week 5 focused on expanding professional cybersecurity skills through continued technical exercises, portfolio development, and the introduction of CyberProAI's Bina AI platform. Internship activities emphasized maintaining a living GitHub portfolio, refining a cybersecurity resume by documenting newly acquired technical skills, and completing recurring weekly documentation while beginning hands-on interaction with Bina AI for AI-assisted cybersecurity investigations. The Cybersecurity Professional Interview assignment remained in progress as students coordinated interview scheduling with CyberProAI personnel.

A significant portion of the weekly meeting was dedicated to career readiness through a resume development workshop presented by Ivy Tech Career Coach Cindy Chaplin. The presentation covered applicant tracking systems (ATS), resume formatting best practices, professional summaries, action-oriented accomplishment statements, and tailoring resumes to cybersecurity job descriptions. Additional guidance reinforced documenting technical growth throughout the internship while continuing work on the Cympire Breaking Barriers exercise and preparing for recurring technical meetings with CyberProAI leadership.

Additional Information

Guest Speaker

- Cindy Chaplin - Ivy Tech Career Coach
 - Applicant Tracking System (ATS) optimization
 - Resume formatting best practices
 - Professional summaries and action verbs
 - Resume customization for cybersecurity positions
 - Professional contact information recommendations
