

Britton Smith
CPIN 280 Cyber Security Internship
Professor Rami Salahieh

WEEK 02 WORK REPORT

Introduction

Week 02 focused on platform familiarization, professional development activities, and developing a better understanding of the organizations supporting the internship program.

Activities Performed

Participated in a CyberProAI meeting that included demonstrations and discussions involving the Cympire and Bina platforms. Topics included cybersecurity training exercises, virtual machine projects, artificial intelligence capabilities, and future internship activities. Additional assignments included resume development, LinkedIn profile creation, GitHub portfolio creation, and research of CyberProAI, Cympire, and Bina.

Knowledge and Skills Gained

Developed a better understanding of CyberProAI, Cympire, and Bina, including their relationship to cybersecurity training, artificial intelligence, and workforce development. Gained additional insight into professional portfolio development through resume, LinkedIn, and GitHub assignments.

Challenges Encountered

The primary challenge was developing a complete understanding of multiple platforms, organizations, and internship requirements simultaneously while establishing a clear picture of how they support the overall internship experience.

Collaboration

Collaborated with fellow interns, faculty, and CyberProAI personnel during platform demonstrations, discussions, and internship planning activities.

Meeting Participants

- Rami Salahieh
- Ken Smith
- Jeremy Tillinger
- Idan Schein

Conclusion

Week 02 expanded understanding of the technologies, organizations, and professional development requirements associated with the internship. Activities completed during this period established the foundation for future research, portfolio development, and hands-on technical exercises.
